Programme Overview

ICC floor plan
The PIMRC symposia are unique in that they have always been able to attract researchers to submit contributions from quite different areas, namely physical layer, networking & protocols and application layer research. This nicely leads to having up to nine sessions in parallel, each devoted to a thematic area, mostly orthogonal to the other ones.

This edition of PIMRC in Berlin sets at the turning point for at least two crucial aspects related to mobile and personal communications. On one hand, the start of the commercial data service of UMTS/IMT-2000 throughout Europe makes it possible to exploit the research and engineering work invested into high-speed mobile multimedia data services. On the other hand, despite the promises of more feature rich, highly interactive and high bit-rate multi-media services for the end-users and increased revenues for the operators, the research community has perceived the limitations of these systems in terms of user throughput and cost of operation and usage and consequently has started to work towards 3GPP Long Term Evolution standardisation. Moreover, research is focussing "Beyond Third Generation (B3G)" systems that outside Europe are being called 4G systems. B3G/4G systems are now being researched following the general guidelines and rough specifications developed by the Wireless World Research Forum and other fora. The respective work has been started in Europe in January 2004 as part of "Integrated Projects" funded in Framework Programme 6 of the European Union and, in the other regions of the world, funded from similar programmes. Exiting developments in the mobile domain start to become visible and first shadows of these are being presented at PIMRC 2005.

We would like to thank everybody having contributed to the success of the symposium!

First, our thanks go to the submitted paper’s authors, reaching this year the number of 890 submissions. Out of these we compiled 475 oral presentations and 70 Posters.

Second, our thanks go to the invited paper authors, panellists, session organizers, keynote and plenary session speakers and session chairs who have accepted to be present and make PIMRC 2005 a success.

Third, our thanks go to the members of the Technical Programme Committee and the numerous reviewers, whose expertise and diligent work have substantially contributed to compile a very attractive conference programme. We have managed to peer review each submitted paper by one TPC member and two other experts, in addition, with a total of three reviews per paper. 1184 persons have contributed to the review process, performing 2604 reviews in total.

Our thanks go also to all the people involved in the organisation of PIMRC 2005, namely logistics and secretariat, the Invited Paper Chairs Raj Ganesh, Sastri Kota and Kaveh Pahlavan, the Tutorial Chairs Carmelita Görg, Gerhard Fettweis and Martin Haardt, the Panel Chair Jorge Perreira and the people giving the local technical support of the sessions here in Berlin. Besides the VDE Conference Secretariat, especially, Tim Irnich (backed-up by Lars Berlemann), both from ComNets RWTH Aachen University, are worth mentioning for their steady and immense support to make this event happen. They took the biggest load in organizing the paper review process and answering the avalanche of emails related to submission and review of papers, and assisting in setting-up the final programme. Many thanks to both of them!

All the people mentioned above have been very dedicated and worked very hard towards the success of the symposium. And they did it as volunteers.

Nevertheless, the final word on the success of PIMRC 2005 depends on the intensity of interchange of ideas taking place during the symposium days.

We had invited the PIMRC 2005 delegates to make use of a new offering, namely to mark those PIMRC 2005 papers on a list, provided to each delegate, that they are most interested in, to be emailed to them ahead of the symposium. Our intention was to contribute by this to stipulate lively discussions during the sessions that we expect to be more substantial when the questions asked are backed by a printed copy of the paper discussed. You have made extensive use of this offering. We sincerely hope that this will result in substantive discussions of the papers presented.

The TPC members of 16th PIMRC 2005 which we were able to attract to support us, are listed in the "committees" section.

As usual on Sunday, Sept. 11, 2005, a number of Tutorials are offered for subscription, out of 21 proposals that the Tutorial Chairs had to select from.

My sincere hope is that you will find PIMRC 2005 worth attending and that you will find the city of Berlin and the environment rewarding.

**Albert Einstein Year 2005**

In the year 1905 Albert Einstein published five scientific works which were to fundamentally alter the conception of the world in physics: The special theory of relativity revolutionized our idea of space and time, and E=mc2 became the best known equation in physics.

On the occasion of the 100th anniversary of Einstein's "Miracle Year 1905", the UNESCO declared the year 2005 the "World Year of Physics", during which worldwide actions are to draw attention to the importance of physics.

The Federal Republic of Germany, too, is marking the Einstein Year 2005 with numerous scientific and artistic programs. An overview of all activities taking place during your stay in Berlin and more detailed information on the Einstein Year can be found at www.einsteinjahr.de

A special exhibition of Einstein's life and historic artefacts are displayed in the historic "Kronprinzenpalais" at the Boulevard "Unter den Linden".

**WEATHER**

Moderate temperatures may be expected in September. But occasional rain is not uncommon during this period. Therefore a jacket or sweater and an umbrella is recommended especially for the evenings.

**INSURANCE**

The organisers may not be held responsible for any injury to participants or damage, theft and loss of personal belongings. Participants should therefore make their own insurance arrangements.

**SHOPPING**

Most shops are located in the area around the Friedrichstraße (Eastern part of Berlin) and Kurfürstendamm (Western part of Berlin). The elegant boulevards invite to shop and stroll through their boutiques and noble warehouses. You will find exquisite shops as well on the legendary avenue "Unter den Linden". Usually, shops are open from Monday to Saturday 9.00 h - 20:00 h. Shops are generally closed on Sunday.

The official currency in Germany is the Euro (€). Usual credit cards (Mastercard, American Express, VISA) are accepted in hotels, department stores and restaurants. Currently (September 2005) the exchange rate is approx. 1 Euro ≈ 1,25 US $.

Power supply is 230 V AC, 50 Hz. Participants intending to use the internet are kindly asked to have connectors available for the mains and Texas or TAE 6 (German phone standard) to connect the phone grid on analogue basis. Digital access (ISDN) may be available on request. Connectors are available at most international airports or department stores. Most hotels have TAE 6 plug ins in the rooms or business centre.

Small lunches and sandwiches are available for purchase from the booth in the foyer of ICC.
